**Abstract.** *Developing speaking skills remains one of the most complex aspects of English language learning, especially in contexts where learners have limited exposure to authentic communication. In many classrooms, students possess sufficient grammatical knowledge but struggle to express their ideas fluently and confidently. This situation highlights the need for interactive and learner-centered teaching methods. Debate is considered one of the most effective communicative activities that encourages active participation, critical thinking, and meaningful language use. This article explores the effectiveness of debates in developing English speaking skills by analyzing their impact on fluency, accuracy, confidence, vocabulary expansion, and communicative competence. The study also discusses the pedagogical value of debates in creating a motivating learning environment and promoting learner autonomy. The findings indicate that debates significantly enhance students' speaking performance and help them become more confident and competent English speakers.*

**Keywords:** *debates, speaking development, English language teaching, communicative competence, critical thinking.*

**Annotatsiya.** *Ingliz tilini o'rganishda og'zaki nutq ko'nikmalarini rivojlantirish eng murakkab va muhim jihatlardan biri hisoblanadi. Ko'plab o'quvchilar grammatik bilimlarga ega bo'lsa-da, o'z fikrlarini erkin va ravon ifodalashda qiyinchiliklarga duch keladilar. Bu holat ta'lim jarayonida interaktiv va o'quvchi markazidagi metodlardan foydalanish zarurligini ko'rsatadi. Debat metodi o'quvchilarning faol ishtirokini ta'minlaydigan, tanqidiy fikrlashni rivojlantiradigan va tilni real muloqot jarayonida qo'llashga undaydigan samarali usullardan biri hisoblanadi. Ushbu maqolada debatlarining ingliz tilida gapirish ko'nikmalarini rivojlantirishdagi samaradorligi tahlil qilinadi. Tadqiqot natijalari shuni ko'rsatadiki, debatlar o'quvchilarning nutq ravonligi, aniqligi, ishonchi va kommunikativ kompetensiyasini sezilarli darajada oshiradi.*

**Kalit so'zlar:** *debatlar, og'zaki nutqni rivojlantirish, ingliz tili ta'limi, kommunikativ kompetensiya, tanqidiy fikrlash.*

**Аннотация.** *Развитие навыков устной речи является одной из ключевых задач в обучении английскому языку. Во многих случаях учащиеся обладают достаточными теоретическими знаниями, однако испытывают трудности при устном выражении своих мыслей. Это требует внедрения интерактивных и коммуникативных методов обучения. Дебаты рассматриваются как эффективный метод, способствующий активному использованию языка, развитию критического мышления и формированию коммуникативной компетенции. В данной статье анализируется влияние дебатов на развитие устной речи на английском языке.*

*Результаты исследования показывают, что использование дебатов повышает беглость речи, уверенность учащихся и их способность к аргументированному высказыванию.*

**Ключевые слова:** *дебаты, развитие устной речи, обучение английскому языку, коммуникативная компетенция, критическое мышление.*

In contemporary English language teaching, speaking is regarded as a fundamental skill that reflects learners' overall language proficiency. Unlike reading and writing, speaking requires immediate language processing, spontaneous idea generation, and real-time interaction. Many learners face difficulties in speaking English due to psychological barriers, fear of making mistakes, limited vocabulary, and insufficient opportunities for practice. These challenges are particularly evident in EFL contexts, where English is rarely used outside the classroom. As a result, students often develop passive knowledge of the language without achieving communicative competence

Modern pedagogical approaches emphasize the importance of learner-centered instruction and communicative activities that engage students in meaningful interaction. Among various interactive techniques, debates have gained recognition as an effective instructional tool for enhancing speaking skills.

Debates provide learners with a structured yet flexible platform to express opinions, defend viewpoints, and respond to opposing arguments. Through this process, learners are required to actively use language rather than merely memorize grammatical rules or vocabulary items.

From a communicative perspective, debates create an authentic speaking environment where language is used as a tool for persuasion and interaction. Learners are motivated to speak because they have a clear purpose and audience. This sense of purpose encourages them to organize their thoughts more carefully and articulate ideas more confidently. Regular exposure to debate activities helps learners develop fluency, as they become accustomed to speaking continuously without excessive pauses or hesitation.

Another significant advantage of debates is their role in expanding learners' vocabulary and improving language accuracy. While preparing for debates, students engage in extensive reading and research, which exposes them to new lexical items and topic-related expressions.

During debates, learners practice using functional language such as agreeing, disagreeing, clarifying, and emphasizing points. This repeated use of language structures in meaningful contexts contributes to better retention and more accurate usage.

Confidence building is another critical aspect of debate-based learning. Many learners experience anxiety when speaking English in front of others. Debates gradually reduce this anxiety by providing a supportive and collaborative environment where mistakes are seen as part of the learning process. As students gain experience, they become more self-assured and willing to participate in discussions. This increased confidence often transfers to other speaking activities both inside and outside the classroom.

Debates also play an essential role in developing critical thinking skills. Learners are encouraged to analyze issues from multiple perspectives, evaluate evidence, and construct logical arguments.

This integration of language learning with higher-order thinking skills enhances cognitive engagement and makes the learning process more meaningful. In academic contexts, such skills are particularly valuable, as students are required to present arguments, participate in discussions, and defend their viewpoints in English.

The successful implementation of debates in the classroom depends on careful planning and appropriate guidance from the teacher. Topics should be relevant to students' interests and suitable for their language level. Teachers should provide clear instructions, useful language expressions, and constructive feedback. When managed effectively, debates promote equal participation and collaborative learning, ensuring that all students benefit from the activity.

Despite their numerous advantages, debates may present certain challenges. Some learners may feel intimidated by public speaking, while others may dominate the discussion. These issues can be addressed by organizing small-group debates, assigning specific roles, and creating a supportive classroom atmosphere. With proper scaffolding, debates can be adapted to different proficiency levels and learning contexts.

Debates have proven to be an effective method for enhancing English speaking skills among learners. They not only improve fluency, accuracy, and vocabulary but also build learners' confidence and reduce anxiety associated with speaking in a foreign language. Through structured interaction and purposeful communication, debates encourage critical thinking and the ability to construct logical arguments, which are essential for academic and professional success.

Furthermore, debates foster learner autonomy and motivation, allowing students to actively engage with the learning process. While challenges such as unequal participation or initial hesitation may occur, careful planning and teacher support can overcome these obstacles.

Incorporating debates into English language teaching provides a comprehensive approach that combines linguistic, cognitive, and social development, ensuring that learners become competent and confident speakers prepared for both real-life communication and academic endeavors.
